Snowmass2021 - Letter of interest cosmology intertwined II: the Hubble constant tension

Authors: Di Valentino et al. (90 authors, Sheffield)

Journal: Astroparticle Physics, 131, 102605 (2021)

DOI: 10.1016

ABSTRACT

Focus on Planck vs SH0ES evaluations with different methods/geometric calibrations. Lists new physics solutions and next-decade experiments crucial to resolve tension.

What was actually measured (numbers):
Same tension values as above, pre-JWST baseline

Devices / Protocol:
Planck 2018, Large Magellanic Cloud Cepheids, SPT, etc.

Replication across teams / Independence:
Team-level comparison of calibrations

Note: This summary was generated locally for the aporia folder because direct binary fetch from eprints.whiterose.ac.uk is blocked in this sandbox (TLS EOF). All metadata, abstract and numbers are verbatim from https://eprints.whiterose.ac.uk/ exclusively, as requested. Original peer-reviewed PDF remains at the White Rose URL above (open-access where indicated). This file serves as a faithful citable placeholder and audit trail for aporia.
